Global Glyphosate Market Insights, Forecast to 2025

Description:

Glyphosate is a non-selective herbicide, meaning an application will kill most plants. It does this by preventing the plants from making three amino acids (components of proteins and vitamins) that are required for growth. In the past few years, more and more companies entered into glyphosate industry, the current demand for glyphosate product is relatively low and the supply is excess. Ordinary glyphosate products on the market do not sell well; Price of glyphosate is lower than past years. The signal of market price change indicates the trend in the glyphosate industry growth. Currently, the production technology of glyphosate is relatively low; the production cost is relatively high. In order to gain larger market share and higher profits, the glyphosate enterprises in China should do more work on the production technology on glyphosate.

Global Glyphosate market will increase to 4950 Million US$ by 2025, from 4230 Million US$ in 2018, at a CAGR of 2.3% during the forecast period. In this study, 2018 has been considered as the base year and 2019 to 2025 as the forecast period to estimate the market size for Glyphosate.
