Description:
Hydraulic Demolition Machine and Breaker are the machines designed to knock down or break rigid structure. The hydraulic demolition machine and breaker have hydraulic system attached to the machine which provides perfect hydraulic flow through engine speed. Thus the system ensures hydraulic power need during the demolition and breaking process. A breaker is a powerful beating hammer fitted to an excavator for demolishing rocks or concrete structures. The breaker is powered with the help of auxiliary hydraulic system from the excavator and is operated by the foot-operated valve.
