Pepitides are derived from animal source and possess antibacterial activity that comes under animal antibacterial peptides. They contain residue of amino acids generally about 15 to 45. Antibacterial peptides are the effector molecules of innate immunity. Majority of the antibacterial peptides are cationic in nature. In insects, the cecropin type of linear peptide without cysteine are found. Now, more than 900 sequences of proteins and antibacterial peptides from plants and animals are stored in database. The antibacterial peptides are broad spectrum in activity. The antibacterial peptides are amphipathic in structure and contains positive charge.
