Semi-rigid spray polyurethane foam is a chemical product, mainly produced by polyols, isocyanate, etc. and commonly known as open cell spray polyurethane foam. Open cell SPF is commonly known as half-pound foam. It is a semi-rigid material with a sponge-like appearance that expands during installation and creates small, open cells that are filled with carbon dioxide. Due to its ability to expand during the application process, it fills cracks, crevices and voids and adheres to irregular surfaces or substrates to form an air sealing insulation.
