Methanesulphonic acid (MSA) is an alkyl sulfonic acid. Methanesulphonic acid can be considered as an intermediate compound between methylsulfonylmethane and sulfuric acid. The acid shows exceptional compatibility in terms of solubility with water and solvents that are oxygenated but is hardly soluble in most of the hydrocarbons.

On the basis of applications, electroplating application is expected to account for a relatively larger share in overall global methanesulfonic acid consumption during forecast period. Moreover, medicine and pharmaceuticals related application segment is expected to register relatively faster growth during the same period.
