Methanesulfonic acid (MSA), the simplest alkanesulfonic acid, is a hygroscopic colorless liquid or white solid, depending on whether the ambient temperature is greater or less than 20 °C. It is very soluble in water and oxygenated solvents, but sparingly soluble in most hydrocarbons. In aqueous solution, it is a strong acid (completely ionized).

Methanesulfonic acid has two types, such as industrial grade (methanesulfonic acid 70%) and pharmaceutical grade (methanesulfonic acid 99%). Methanesulfonic acid 70% is mainly used in electroplating industry and methanesulfonic acid 99% is used in medicine. In 2016, global industrial grade methanesulfonic acid production took about 87.07%.

Nowadays, global methanesulfonic acid production areas are mainly in Europe, USA and China. In 2016, Europe methanesulfonic acid production took about 62.86% with 56052 MT and it is the largest production region.
