Description:

Biological pesticides include several types of pest management intervention: through predatory, parasitic, or chemical relationships. The term has been associated historically with biological control — and by implication — the manipulation of living organisms. Regulatory positions can be influenced by public perceptions.

Growth in the market is anticipated on account of shrinking area under cultivation leading to need for higher productivity per acre and increasing demand for nutritional food items, globally. Rising focus towards the eradication of crop production losses and increase the nutritional qualities of the product is further expected to aid market growth in the coming years. Crop protection measures of various governments and organizations leading to weed management programs, coupled with emergence of new trends such as development of Nano pesticides to reduce the effect of pesticide application on environment are anticipated to positively influence the global pesticides market over the coming years.

The global Bio Pesticides market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
