Based on type, the market for dust control systems has been segmented into wet and dry. The wet segment accounted for a larger market share of the global dust control systems market in 2017. Wet dust control systems are further segmented into wet scrubbers and wet electrostatic precipitators. As wet electrostatic precipitators are used to treat sub-micron particulates, such as aerosols or fumes, their demand is expected to grow at a higher rate. The dry dust control systems are segmented into bag dust collectors, electrostatic dust collectors, vacuum dust collectors, modular dust collectors, and cyclone dust control systems. The electrostatic dust collectors segment is projected to grow at the highest CAGR, followed by the bag dust collectors segment. By mobility, the market for dust control systems has been segmented into mobile controllers and fixed controllers. The mobile controllers segment dominated the global dust control systems market with a relatively larger share in 2017. Mobile controllers include sub-types such as handheld, self-propelled, tractor-mounted, and trailed. Easy and efficient working of tractor-mounted dust control systems makes it the dominant and fastest-growing market, globally.

The global Dust Control Systems market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of 5.6% during 2019-2025.
