Description:

Women rehabilitation products and services (therapy) are used to aid in the recovery of women who have undergone pregnancy (prenatal and post-natal), met with an accident, undergone surgery, or suffering from chronic diseases such as urinary tract infection (UTI), osteoporosis, and lymphedema. Women’s health issues are increasing in emerging countries and they need to be addressed through attention from caregivers. Hence, rehabilitation is essential for women to live a healthier life. Rehabilitation therapies such as physical, occupational, massage, chiropractic, hydro or aquatic, vestibular, speech, and compression help maintain women’s health.

Growing global population coupled with increasing birth rates is expected to increase consumer base in emerging and underdeveloped economies with large untapped opportunities. In addition, increasing employment of women at a global level results in higher disposable income and this has also resulted in development of chronic conditions due to sedentary lifestyle, stress/fatigue. These factors are further anticipated to push the demand for rehabilitation products over the forecast period.

The global Women Health Rehabilitation Products market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
