Bean sprouts are a common ingredient, especially in Asian cuisine, made from sprouting beans, which are obtained from the germination of beans. Mung bean sprouts and soybean sprouts are particular the main bean sources. Bean sprouts originate in Asia, where they have been made and used for thousands of years. Cultural diffusion led to the appearance of sprouts in other places and in other cuisines, and intrepid cooks began sprouting all sorts of things to add to their food. In most cases, they can be used raw or lightly cooked, and they should be used as quickly as possible. If they are going to be cooked, they can be frozen for up to three months.

The major market is concentrated in Asia. China, Japan and Korea are the major manufacturers and consumption markets. Because of Storage issues, bean sprouts are mainly consumed at the local. These manufacturers in Japan and Korea often import beans from abroad.

China is the largest consumption market and occupied about 90% market share. In China, traditional manual manufacturing process is still the major and transformed into manufactured with automated equipment.
