Description:

Hybrid stepper motors combine aspects of both permanent magnet (PM) and variable reluctance (VR) stepper motors. Like PM motors, they contain a permanent magnet in the rotor teeth. Two sets of teeth called cups ring the rotor. One ring is all south poles, and the other ring is all north poles. This report only focuses on hybrid stepper motors applied in industrial application such as automobile industry, medical industry, telecommunication equipment, CNC machine and so on.

Japan and China is the largest supplier of hybrid stepper motors, with a production market share nearly 62.88% in 2018. Asia Pacific also is the largest consumption place, with a consumption market share nearly 54.64% in 2018. Following Asia Pacific, North America is the second largest consumption place with the consumption market share of 24.01%.

The Industrial Hybrid Stepper Motors market was valued at 930 Million US$ in 2018 and is projected to reach 1290 Million US$ by 2025, at a CAGR of 4.8% during the forecast period.
