This report mainly focus on Screw Compressors used for process gas market. Process Gas Compressor is mechanical device that increases the pressure of process gas such as argon, ethylene, fluorine, helium, hydrogen, oxygen, neon, silane, TFE, xenon and other gases, by reducing its volume. This report does not cover compressors for air and nitrogen. Compressors are similar to pumps: both increase the pressure on a fluid and both can transport the fluid through a pipe. As gases are compressible, the compressor also reduces the volume of a gas.
