**Description:**

A bio fertilizer is a substance which contains living microorganisms which, when applied to seeds, plant surfaces, or soil, colonize the rhizosphere or the interior of the plant and promotes growth by increasing the supply or availability of primary nutrients to the host plant. The growth in the global bio fertilizers market can be attributed to the growing adoption of advanced and sophisticated technologies by farmers to increase arable land and improve the overall productivity. In addition to this, growing fondness for organic food among the health-conscious population is driving the demand for bio fertilizers over chemical fertilizers across the globe. As a result, large volumes of agricultural produce to cater the demand from increasing population is subsequently accelerating the usage and applications of bio fertilizers at a prodigious rate. Global Bio Fertilizers market size will increase to xx Million US$ by 2025, from xx Million US$ in 2018, at a CAGR of xx% during the forecast period.
