Transcatheter Aortic Valve Replacement (TAVR), also referred as Transcatheter Aortic Valve Implantation (TAVI) is a minimally invasive surgical procedure repairs the valve without removing the old, damaged valve. Instead, it wedges a replacement valve into the aortic valve's place. Normally valve replacement method requires an open heart procedure with a sternotomy, in which the chest is surgically separated for the treatment. The TAVR procedures can be done through very small openings that leave all the chest bones in place.
