Inflammatory bowel disease (IBD) is a broad term used to describe disorders involving chronic inflammation of digestive tract. The disease is categorized by severe diarrhea, abdominal pain, fatigue, and weight loss. Increase in incidences of IBD and rise in adoption of anti-inflammatory drugs drive the market. In addition, strong upcoming pipeline of IBD drugs also boosts the market growth. However, side effects of these drugs over a patients body restrain the market growth. Development of biosimilars for existing drugs, and growth opportunities in the emerging economies of Asia-Pacific and LAMEA provide opportunities for the market growth.
