Cyclopentanone is a clear colourless liquid organic compound with a peppermint-like odour and is a cyclic ketone. It is mainly as an intermediate for synthesis of fragrance, pharmaceuticals, rubber, etc. And it is used also as a solvent for electronic applications.

Cyclopentanone is a clear colorless liquid with a petroleum-like odor. It is commonly used as an intermediate for synthesis of pharmaceuticals, perfumery products and aromas. As for the downstream application, fragrance is the largest market, which accounted for 56.75% of the consumption in 2016. At present, the mainstream production of cyclopentanone is adipic acid thermal decomposition method. However, it has some disadvantages, such as the shortage of raw materials, high cost and more secondary reaction. On the contrary, the cyclopentene oxidation method has adequate resources and is estimated to be the most promising cyclopentanone synthesis method.

The production of cyclopentanone distributed Mainly in Europe and Japan. West Europe is the largest production base of cyclopentanone in the world in the past years and it will keep the same position in the next few years. The West Europe took up 49.59% Share in the global production market in 2016.

According to this study, over the next five years the Cyclopentanone market will register a -1.5% CAGR in terms of revenue, the global market size will reach US$ 97.8 million by 2024, from US$ 105.6 million in 2019.
