Increasingly instead of profiled sheets (uninsulated trapezoidal sheets), insulated roof panels are used. These panels consist of an upper and lower sheet, which are usually made of galvanised painted steel. Standard thicknesses tend to be between 0.4mm to 1.0mm, which can produce different strengths as needed. It is also possible to have the outer and inner sheets made from aluminium or stainless steel. In areas exposed to a heavy stress due e.g. to ammonia, ECO panels are also used, as an alternative to insulated roof panels with a galvanised inner surface made of steel sheet. The inner surface of these panels is made of stucco embossed aluminium foil. In addition, these roof panels are cheaper than conventional roof panels.
