Description:
Barium chloride is a prominent barium salt compound which is readily soluble in the water owing to its hygroscopic nature. Industrially, barium chloride is produced by reaction between barites (BaSO4) and hydrochloric acid (HCl), at high temperature. The product obtained is hydrated barium chloride which mainly used in water treatment and chlorine industry. In Chlorine industry, barium chloride is used for the purification of brine solution, especially in caustic chlorine plant. Besides, the barium chloride finds application in Organic pigments, Heat treating baths, barium salt production, and Aluminum refining, among other application.
