Description:
Silica gel, a form of silicon dioxide, is prepared commercially by the acidification of sodium silicate. It is used in a variety of commercial, industrial, and household applications and is available in the market in various forms and product types. The indicative silica gel dominated the market and accounted for the largest market share.

In terms of geography, APAC ranks first in the global silica gel market and will continue its dominance over the predicted period. Much of the region’s growth is attributable to the rising production of silica gel in China. China’s high-value-added silica gel has extensive applications and is used as matting agents for paints, plastics, and other anti-adhesives and catalysts. The increasing environmental standards have led to high demand for silica gel as an industrial requirement. It is required for water adsorption in the oil and gas and petrochemical industries, clean foundry additives solutions, biodiesel purification, and in power plants.
