An anti-tank guided missile is a small weapon that is designed for destroying tanks and other armored vehicles that are used mostly in close combat warfare. Such missiles are conceptually and design-wise different than conventional rocket-propelled grenades (RPGs) as the ATG missiles are required to be steered or guided toward their targets after the launch.

The vehicle-mounted anti-tank missiles segment accounted for the major share of the anti tank guided missile system market during 2017. The dominance of this market is characterized by huge investments by countries to procure and modernize combat platforms.

In terms of geography, EMEA accounted for the majority of shares in the anti tank guided missile system market during 2017. Replacing older generation missiles with advanced ones, adopting man-portable missiles in place of recoilless guns, procurement of platforms like battle tanks or modernizing them are major drivers for the market.
