Lubrication systems provide precise amounts of lubricants – oil or grease – to moving parts, notably bearings, to minimize friction and wear. These systems are increasingly seen as mission-critical products aimed at improving the productivity, reliability, energy efficiency, environmental compliance and maintenance of vehicles and industrial machinery. Automatic lubrication systems include pumps, reservoirs, valves, pipes, metering system, connectors and controllers. Tools and equipment include grease guns, reels, meters, pumps and fluid drain systems. Design and installation services are playing a more important role than before.

Lubrication systems are widely used in metal and mineral processing industries, as various types of equipment are subjected to extreme heavy load, high speed, high temperature, or dusty and polluted environment. Also, the positive outlook for end-user industries is expected to augment the demand for lubrication systems in the near future.

In 2017, the steel industry segment constituted more than 20% share of global lubrication systems market. In the steel industry, lubrication is required at every step across the entire delivery chain.

In 2017, the manual lubrication systems segment dominated the global lubrication systems market. Lubrication systems that are operated manually such as grease guns, grease packers, and grease pumps are classified as manual lubrication systems.

The Lubrication Systems market was valued at xx Million US$ in 2018 and is projected to reach xx Million US$ by 2025, at a CAGR of xx% during the forecast period.
