Description:
Infrared (IR)-decoy flares, also known as decoy flares, serve to counter IR-guided surface-to-air missiles or air-to-air missiles and can be expelled from the craft according to an anticipated threat in defined sequences. One trend in the market is growing development of missile jamming decoys. The growing development of missile jamming decoys is identified as one of the key trends that will stimulate growth in the decoy flares market during the forecasted period. Decoy flares are defensive mechanisms employed by military aircraft to avoid detection and attack by adversary air defense systems. The increase in the number of new aircraft, especially military ones, have a huge impact on the growth of the global decoy flares market.

One challenge in the market is environmental and safety concerns pertaining to decoy flare production. Pyrotechnic compositions of MTV are widely used in military aircraft decoy flares as an important countermeasure to protect fixed-wing aircraft and military helicopters against heat-seeking missiles.
