Self-leveling concrete is polymer-modified cement that has high flow characteristics and, in contrast to traditional concrete, does not require the addition of excessive amounts of water for placement. Self-leveling concrete is typically used to create a flat and smooth surface with a compressive strength similar to or higher than that of traditional concrete prior to installing interior floor coverings.

The Europe region is estimated to be the largest market for self-leveling concrete in 2018. Italy and Germany are the major countries in the Europe self-leveling concrete market. The growth of the Europe self-leveling concrete market can be attributed to the rise in construction activities, followed by the growing renovation and re-construction market in the region. These factors are anticipated to drive the self-leveling concrete market in the coming years. The Asia Pacific self-leveling concrete market is expected to grow at the highest CAGR from 2018 to 2023.
