Description:
Atomized copper powder is further processed by electrolytic copper, pale rose mangrove dendritic and irregular loaded, spherical and spherical powder in the humid air, easy oxidation, can dissolve in hot sulfuric acid or nitric acid. Widely used in injection molding, welding materials, electronic materials and other industries. Atomic-force microscopy (AFM) or scanning-force Microscopy (SFM) is a very-high-resolution type of scanning probe microscopy (SPM), with demonstrated resolution on the order of fractions of a nanometer, more than 1000 times better than the optical diffraction limit.
