Harvesting machinery or equipment is a mechanical device used for harvesting. There are several types of harvester machines which are generally classified by crop. Reapers are used for cutting cereal grains, threshers for separating the seed from the plant; whereas corn or maize harvesting is performed by employing a specially designed mechanical device mechanical corn pickers. A typical harvester machine comprises of a traveling part, a reaping part, and a baling part. Also the farm harvester machines are also used for controlling the production of weeds. Machines like field choppers, balers, mowers, crushers and windrowers are the common examples of this category.
