Description:
An arc flash is the heat and light produced from an electric arc which is supplied through enough electrical energy to cause substantial damage, fire, harm or injury. Also, an arc flash is a phenomenon where a flashover of electric current leaves its intended path and travels through the air from one conductor to another, or to ground. The results are often violent and when a human is in close proximity to the arc flash, serious injury and even death can occur.

The arc flash detection & control system holds the largest share in the arc flash protection market, by equipment type during the forecast period.
