Purified terephthalic acid (PTA) is a raw material used in making high-performance multi-purpose plastics such as polybutyl terephthalate (PBT), polyethylene terephthalate (PET), and the new bioplastic that has been garnering attention in recent years, polytrimethylene terephthalate (PTT). Purified terephthalic acid (PTA) is made by causing a reaction between the secondary petroleum product paraxylene (PX) and acetic acid.

Based on region, the purified terephthalic acid market in South America is expected to grow at the highest CAGR during the forecast period. This growth can be attributed to the increased demand for purified terephthalic acid from PET grade resin producers in South America. Asia Pacific is the largest market for purified terephthalic acid. The rise in consumption of PET material bottles and the increase in demand for purified terephthalic acid from the packaging industry are key factors driving the growth of the Asia Pacific purified terephthalic acid market.

The global Purified Terephthalic Acid (PTA) market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
