Coalbed Methane (CBM) refers to methane that is found in coal seams. It is formed during the process of coalification, the transformation of plant material into coal. CBM is also known as virgin coal seam methane or coal seam gas. It is widely considered an "unconventional" source of natural gas. In the United States, CBM is a valuable resource that accounts for about 5 percent of total U.S. natural gas production annually. The global Coalbed Methane (CBM) market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025. This report focuses on Coalbed Methane (CBM) volume and value at global level, regional level and company level.
