An endoscopy (looking inside) is used in medicine to look inside the body.[1] The endoscopy procedure uses an endoscope to examine the interior of a hollow organ or cavity of the body. Unlike many other medical imaging techniques, endoscopes are inserted directly into the organ.

There are many types of endoscopes. Depending on the site in the body and type of procedure an endoscopy may be performed either by a doctor or a surgeon. A patient may be fully conscious or anaesthetised during the procedure.

The classification of Endoscopy Device includes Flexible Endoscopes and Rigid Endoscopes, and the proportion of Rigid Endoscopes in 2017 is about 64%.

Endoscopy Device is widely used in Hospital & Clinic, ASCs and other field. The most proportion of Endoscopy Device is used in Hospital & Clinic, and the revenue in 2017 is 70%.

North America is the largest consumption place, with a consumption market share nearly 38% in 2016. Following North America, Europe is the second largest consumption place with the consumption market share of 29%.

The global Endoscopy Devices market was valued at 5740 million US$ in 2018 and will reach 9050 million US$ by the end of 2025, growing at a CAGR of 5.9% during 2019-2025.
