The driver state monitoring system is an advanced driver assistance system tool adopted to analyze the state of a driver while driving, thereby, preventing fatalities or injuries that can be caused due to distractions. The market encompasses the device which captures the driver's eye movement using infrared, camera, and other sensors. The driving behavior can be monitored by other methods like using sensors in seats and steering and by using biometrics. Driver state monitoring system detects drowsiness by eyeball movement and the stability of steer by measuring the steering angle. The market includes both passenger vehicles and commercial vehicles segments in APAC, EMEA, and the Americas.
