Lubricating Oils and Greases refer to an oily substance that is used to cover or treat machinery so as to lessen friction. With the expansion of the passenger vehicles segment, there has been a rise in demand for high-quality automotive lubricants with better fuel efficiency and lower emissions. Government schemes in emerging economies, such as the “Make in India” program initiated by the Indian government, have attracted high foreign investments across the automotive industry. This has further boosted demand for lubricants. Stable base oil production across regions has stimulated feedstock security among blenders in the recent past. Stable supply would thereby address profitability concerns of manufacturers, thereby positively influencing industry competition. Moreover, recovering end-use industries are likely to drive sales of lubricating oil, which is slated to provide equilibrium to the supply-demand scenario.

In addition, high growth in the base oil market, rapid industrialization, burgeoning population and urbanization, and high growth in major end-use industries such as textiles, chemicals, food processing, and metalworking are some other factors driving industry growth. The global Lubricating Oils and Greases market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
