Drug delivery system introduces therapeutic substance in the body as formulation or device to improve its efficiency and safety. There was requirement drug delivery system that could maintain the steady release of therapeutic drugs within the specific site. Implantable drug delivery system becomes new kind of drug delivery system which can directly implant in the human body to optimize therapeutic properties. This system is more steady, effective, safe and reliable than other drug delivery system. For intravenous drug delivery system, drugs actions were short, and frequent injections were required. For topical drug delivery system, absorption drug may be limited due physiochemical characteristic of drugs. Implantable drug delivery system does not have limitation associated with intravenous and topical drug delivery system beside it is controlled drug delivery system.
