Feed grade Phosphate refers to inorganic salts of phosphoric acid, which is necessary to meet the phosphorus requirements for animal production to ensure optimal growth, fertility and bone development. The market in Europe is driven by the high production and consumption of feed phosphate in the region. Further growth can be attributed to the region being a major producer of livestock and accounting for a substantial share of meat production, globally. Additionally, the region also has several policies in place, to encourage the production of quality meat products, at low costs. The South American market is projected to grow at the highest CAGR from 2018 to 2023. The increase in the demand for animal-based products; growth of the regional population; rise in disposable incomes; the rise in urbanization, especially in Brazil and Argentina; and continuous expansions in the feed industry and animal husbandry sector drives the feed phosphates market in South America.

The global Feed grade Phosphate market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
