A compound fertilizer comprises two or more vital plant nutrients, and contains secondary nutrients and trace elements. The compound can be organic or inorganic. Organic compounds include fish, bone meal, manure, and compost. Inorganic fertilizers combine various chemicals in the manufacturing process. The essential plant nutrients are phosphorus, nitrogen, and potassium, which are required for plants to complete their life cycle. Secondary nutrients are sulfur, calcium, and magnesium, which are present in the soil but need to be replenished periodically. Trace elements might be added, such as boron, copper, and cobalt.
