Global Liquefied Natural Gas (LNG) Compressor Market Professional Survey Report 2019

Description:
LNG compressors are mainly compressed natural gas (including content, methane, propane, etc.) with relatively high pressure and high risk level. LNG compressors are oil-free compressors. Oil-free lubrication is used between cylinder liner pistons to ensure that natural gas is not contaminated during transportation. Secondly, the drive motor is required to be a riot motor. Changing energy consumption patterns coupled with growing natural gas demand as a major fossil fuel is expected to drive global liquefied natural gas (LNG) compressor market growth over the forecast period. The global Liquefied Natural Gas (LNG) Compressor market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
