Naphthalene is an organic compound with formula C10H8. It is the simplest polycyclic aromatic hydrocarbon, and is a white crystalline solid with a characteristic odor that is detectable at concentrations as low as 0.06 ppm by mass. The growth of the market is on account of superior properties of naphthalene and PCE based admixtures such as enhanced strength, durability, reduced water demand and many other properties required for constructing modern civil structures. In addition to this, with the approval from governments and on Green Building Evaluation standards, the increasing demand for smart water management construction chemicals is going to accelerate the Naphthalene and PCE based Admixtures over the coming years.

The global Naphthalene and PCE based Admixtures market was valued at xx million US$ in 2018 and will reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
